DATASHEET

Zend Administration as a Service

Take the Stress Out of PHP Application Management

Zend Administration as a Service tackles your toughest PHP application administration challenges. Our dedicated team directly manages installing, monitoring, maintaining, and updating PHP runtimes, freeing your team to handle higher-order concerns.

Uninterrupted Performance Monitoring

Zend installs monitoring tooling in your infrastructure to provide continuous performance and health insight for your application, from the underlying system to the web server and PHP. This allows us to quickly identify issues, provide personalized performance recommendations, and deliver prompt alerts of application disruption or failure.

Intuitive Dashboard Interface

Get real-time PHP application performance data via our easy-to-use monitoring dashboard.

Monthly Reporting

Monthly reports are delivered to your inbox, containing insights, recommendations, and alerts.

Turnkey Installations & Custom Configurations

Zend Admin as a Service ensures ZendPHP and your web server are installed according to maintainable standards, configured to work with your extensions, and tuned to meet your performance requirements.

Comprehensive Application Management

Your team is busy delivering features to drive your business goals. Let Zend do the heavy lifting of PHP application management. We will work to improve your application's availability, optimize performance, and find and fix issues in your PHP applications before they become problems – all while lowering your overall cost of ownership.

Simplified Scalability & Observability

PHP applications are complex, and scaling these apps to meet demands can be a complicated process. Zend makes it easy. We install and configure ZendHQ to match your standards, enabling your application to automate recurring jobs, offload long-running processes to workers, monitor performance, deploy at scale, and stay secure.

Scheduled Security Updates

We implement all PHP security patches on your schedule, keeping your application secure and compliant while minimizing disruptions.

Simplify Your PHP App Administration Today
